BladeFX Reporting for Spryker

Operational Reporting platform for Teams That Run the Business - fully integrated into the Spryker Backoffice and Merchant Portal.

April 2025

What is BladeFX Reporting

BladeFX is a **plug-and-play operational reporting platform** built for **operations, logistics, and commercial teams** who need **immediate, role-specific visibility** into their day-to-day activities — without relying on analysts or BI training.

Unlike traditional BI tools, **BladeFX doesn't compete with BI stack** — it **complements** it by surfacing **real-time, actionable insights** from raw data. These are insights BI stack often overlooks, such as fulfillment performance, product stock-outs, and operational bottlenecks.

Designed for **frontline teams**, BladeFX empowers users to **monitor, optimize, and scale** their operations directly within **Spryker** — through a seamless plugin integration.

Who benefits from BladeFX?

Role	What They Need	How BladeFX Helps
Merchants & Marketplace Operators	Visibility into product performance, stock, and pricing across sellers	Reports to monitor fulfillment gaps, returns, and sales trends in real time
Warehouse & Fulfillment Teams	Inventory accuracy, stock movement, and operational efficiency	Real-time and scheduled updates on stock levels, fulfillment, cancellations, and returns to streamline operations
Operations & Supply Chain Managers	Oversight of execution, delivery, and process timelines	Surface real-time data to detect bottlenecks, align teams, and improve process efficiency
Category Managers	Insights into product availability, pricing, and assortment coverage	Track KPIs like stock-outs, overstocks, and category-level product mix
Customer Service Teams	Fast access to order, delivery, and issue data	Instantly retrieve relevant data to resolve issues quickly and confidently
Execs	Reliable, cross-functional performance metrics	Unify KPIs across roles and departments for confident, strategic decision-making

Reporting Layer for the entire Spryker Ecosystem

BladeFX acts as the centralized reporting layer, seamlessly powering real-time and scheduled insights across the entire Spryker ecosystem.

Why BladeFX for Spryker is a game-changer

Instant Operational Visibility
Know exactly what's happening across fulfillment, sales, product catalogue and stock — without switching to external BI tools.

Automation-First Reporting
Auto-scheduled reports and smart alerts / notifications reduce manual effort and eliminate spreadsheet chaos.

Lower TCO
Eliminate developer effort spent building custom forms just to mimic reporting functionality.

Embedded in Spryker
No additional tools to integrate or maintain. BladeFX works seamlessly inside your existing Spryker environment.

Customizable for Every Role
From executives to warehouse teams — every user gets the insights they need, in the interface they use (Spryker BO & MP, BladeFX web application & mobile application).

Faster time-to-insight
From installation to first insights in matter of hours.

Core capabilities at glance

Multi-Source Data integration

Connect to databases, APIs, CSVs, and external platforms like ERP, WMS, loyalty or CRM systems — all within one reporting environment.

Pixel Perfect Outputs

Design reports for any channel — print, PDF, mobile, or screen — with complete control over formatting, layout, and visual precision. Export in multiple formats to seamlessly process and share your data.

Real-Time and Scheduled Reporting

Visualize KPIs across commerce operations with drill-downs, linked reports, and auto-refresh dashboards. Schedule reports for teams or execs — daily, weekly, or on key triggers.

Role Based Access Control

Ensure secure, scoped data access by role, department, or user group — even in multi-tenant environments. Full audit logging included.

Why it matters to Spryker Solution Partners?

A scalable revenue ecosystem powered by BladeFX – unlock new services revenue, without additional Spryker development overhead!

Earns from BladeFX Subscriptions

Earns referrals fees + adds service revenue through report development

Clients and customers gain fast insights without extra dev cost

Turn Reporting into Revenue, While Delivering More Value to Clients

New Revenue Stream for Spryker Solution Partners and System Integrators
Earn referral fees, build custom reports, and provide reporting services – all without touching Spryker core

No Need for Core Developers
SQL Developers or analysts can manage and adjust reports – no PHP or Spryker expertise required

Stronger Business Case for Clients
Clients get powerful, embedded reporting with less cost and complexity than traditional BI tools

Faster Time-to-Impact
Launch operational reports in days - with no long implementation cycles.
